

AI Ethics & Responsible Usage Declaration

I hereby declare that:

- The dataset used in this assignment is properly cited and ethically sourced.
- I have analyzed potential biases present in the dataset and model.
- I have considered privacy implications related to the data used.
- I understand the responsible and ethical usage of the developed system/model.
- This work adheres to institutional guidelines on ethical AI practices.

Dataset Details:

Source: National Stock Exchange of India (NSE) — <https://www.nseindia.com>

Type of Data: Publicly available historical stock price data (daily closing prices)

Contains Personal/Sensitive Data? (Yes/No): No

If Yes, describe anonymization steps: Not applicable — no personal data used

Identified Bias (if any):

The ARIMA model does not take into consideration any external influences (like news events, government policies, RBI's decision on interest rates and trends in the global economy), which can impact the actual outcomes of stock-price projections. In addition, the ARIMA model's assumption that past performance will continue to occur in the future may not be true in every situation, especially when it comes to stock markets.

Responsible Usage Statement:

The forecast results generated by the ARIMA model in this assignment are purely for educational purposes and should not be used for real financial investment decisions. AI tools (Claude by Anthropic) were used to assist in writing and debugging the Python code. All outputs, graphs, and interpretations were personally reviewed and understood before submission. The analysis is based on publicly available data and no confidential or copyrighted datasets were used.

Student Details:

Student Name: Mohammed Affan Ansari

UIN: 231A023

Course: Data Analytics and Visualization (CSC601) — TE Sem VI (2025-26)

Date: 17 March 2026

Signature:

A handwritten signature in black ink, featuring a stylized, cursive script with a prominent horizontal stroke across the middle.
